Early Childhood Education program

The aim of this PhD program is to provide overview of the most recent scientific knowledge on development and education in early childhood. Another important goal is to provide necessary methodological knowledge about current trends, approaches, methods, practical issues to study cognitive, social and emotional skills, abilities of children between 0-12 years.

The doctoral program prepares both scholars capable of innovative interdisciplinary research in early childhood development and education and leaders in child-related social practice and policy.

In the PhD program students work closely with their supervisors and other members of the faculty. Coursework includes: cognitive development and education in early childhood; social, emotional development and education in early childhood; creativity and giftedness in early childhood; play and its importance in early childhood; assessment and evaluation in early childhood; childhood and media.
